AGENCIES**

altair.com/government-agencies

▶ Altair is a global technology company that provides software and cloud solutions in the areas of product development, high performance computing (HPC) and data analytics. Altair enables organizations across broad industry segments to compete more effectively in a connected world while creating a more sustainable future.

To learn more, please visit altair.com

Government and academic organizations around the world depend on technology to drive critical programs including research, administration, and national security. Altair gives institutions the tools they need to make it all possible.

FASTER, MORE ACCURATE FINANCIAL AND HUMAN RESOURCES OPERATIONS

Accurate bookkeeping is especially important for the government, where budgets are highly monitored and regulated. With Altair data analytics solutions, manual general ledger and payroll reconciliations turn into an automated, accurate process that can be completed in seconds, freeing government and educational institutions to save money and focus on serving communities.

ENSURE MILITARY RESOURCES ARE ALWAYS MISSION-READY

Having confidence that military equipment is safe and reliable requires close attention to proactive equipment maintenance schedules. With Altair data analytics solutions, Military Maintenance Groups can more effectively monitor equipment by combining data from different systems to identify which equipment is due for scheduled maintenance and which individuals are due for training.

Altair Data Analytics provides an automated, repeatable and sustainable solution, producing complete, actionable and real-time reports for optimal equipment maintenance

RESTORE FOCUS ON STUDENT SUCCESS

Systems, like BANNER and College, generate unusable text-based reports that cannot be easily reconciled with financial system reports. With Altair data analytics solutions, ERP reports are instantly converted into rows-and-columns and reconciled with updated student account information, freeing institutions to spend less time worrying about maintaining accurate financial records and more time focusing on student success.

Use existing data and no code predictive models to make strategic enrollment decisions and optimize resources

HPC FOR GOVERNMENT AND EDUCATION

Government and academic organizations have long been leading drivers of high-performance computing (HPC), running and developing compute-intensive applications in fields including weather forecasting, space exploration, scientific discovery, and aeronautics research — and researchers are pushing the boundaries of knowledge at leading institutions around the world. HPC technology continues to become more complex as it evolves, and tools to manage that complexity are a requirement. Many universities and government organizations power their workload management with the Altair PBS Works™ suite, and Altair PBS Professional™ is the de-facto standard for managing HPC resources at datacenters all over the planet.

Government agencies and academic institutions across the globe rely on Altair to leverage HPC for critical research and discovery
